A poetic collection of photography exploring the duality and stark beauty of the Indian desert.

This book chronicles the florescence of architecture in the Arabian Gulf after the expulsion of the Portuguese in the early 1600's. It demonstrates how the power vacuum created by the collapse of Portuguese control over the trade routes in the Indian Ocean encouraged a growth in fortified architecture, especially in Oman, that radiated out to the surrounding region and was then slowly replaced by new patterns in domestic and public architecture and town planning throughout the Gulf as the trade lines were secured and the individual countries took the first steps towards the formation of today's modern nation-states. The book documents the buildings and crafts of this era and analyses them within the framework of the political, economic, and social information

available through primary sources from the period in a way that is both intelligent and accessible. It considers the settlements as part of a larger-connected network of cities, towns and villages and focuses both on how the buildings provided innovative solutions to the demanding climate and yet incorporated new decorative and functional ideas. Topics are extensively and richly illustrated with colored photographs of the buildings as they are now, black and white and color historic photographs from archival and museum collections, line drawings, and computer-generated reconstructions. The book is therefore attractive to a number of audiences, including those who live in or travel to the Gulf as well as people with an interest in Arab and Islamic design, culture and society, vernacular architecture, and post-colonial approaches to colonial history.

A beautiful book that presents nearly four centuries of artistic creation from one of the largest former princely states in India, the kingdom of Marwar-Jodhpur in southwestern Rajasthan? Peacock in the Desert traces the evolution of royal identity in the kingdom of Marwar-Jodhpur in southwestern Rajasthan from the 17th century to the establishment of independence after 1947, presenting the area as a microcosm of India's extraordinarily vibrant culture. An international team of contributors has contextualized these regional narratives in relation to external--and even global--forces. The book thus offers a new perspective on the acquisition and commissioning of objects through patronage, diplomacy, matrimonial alliances, trade, and conquest. It sheds fresh light on the influential role of women at the royal courts and examines monarchies as lenses onto crosscultural relationships, the unrecognized roles of groups marginalized in earlier accounts, cultural heterodoxy, and large-scale multicultural exchange. Exploring these webs of

connection, Peacock in the Desert makes a transformative contribution to scholarship. Its multidisciplinary approach to artistic and cultural exchange offers pathbreaking insights, adding crucial chapters to the story of India's royal visual splendor.

Rick Joy builds with remarkable sensitivity, precision, and grace. The allure of his architecture is often guietly and seductively hidden in the sensual qualities of one's experiences: the sounds, smells, tactile qualities, and moods of his work. Granite crunching underfoot, the gentle trickle of water, and the lacy shadow of a mesquite tree all stir the viewers' sensations. "The simplest things can evoke the deepest feelings," Joy says. "The silence in great music is often more profound than the sounds."The nine buildings shown in thins, the first monograph on Joy's work, express his interest in making places that are transcendent moments of space, light, and matter. In each of the projects the physical landscape, its specific environment, and its rich history are revealed and celebrated. While many of the projects here use sustainable materials like rammed earth. Joy's primary interest is in the quality of the spaces he makes. He shows us how efficient and environmentally sensitive architecture can emerge as a by-product from a quest for the timeless qualities that are always associated with great architecture. Presented in the form of lush photography, insightful narratives, and revealing descriptions of his highly collaborative process, this book will bring one to a closer understanding of one of the most interesting architects practicing today.

"Discusses the emergence of socio-historical identities in the Thar Desert with the mobility of its inhabitants"--

Looks at the interior design of modern and traditional style homes in New Mexico, Texas, Arizona, and California

Some of the finest architectural structures in India are to be found below ground: these are its ancient stepwells. Stepwells are unique to India; the earliest rudimentary wells date from about the 4th century CE, and eventually they were built throughout the country, particularly in the arid western regions. Stepwell construction evolved so that, by the 11th century, they were amazingly complex feats of architecture and engineering, not only providing water all year round but also serving as gathering places, refuges and retreats. The journalist Victoria Lautman first encountered stepwells three decades ago, and this book - now available in paperback for the first time - is a testament to her determined efforts over several years to document these fascinating but largely unknown structures before they disappear. Of the thousands of stepwells that proliferated across India, most were abandoned as a result of modernization and the depletion of water tables. Frequently commissioned by royal or wealthy patrons, the wells vary greatly in scale and design. Some also functioned as subterranean Hindu temples, featuring columned pavilions and elaborate stone carvings. Islamic wells were generally less flamboyant, but often incorporated shady loggias and small chambers in which to relax and escape the stifling heat. Today, few stepwells are in use. The majority have been left to silt up, fill with rubbish and crumble into disrepair. Gradually, however, the Indian government and heritage organizations are recognizing the need to preserve these architectural wonders. In 2014 India's grandest and best-known stepwell, the Rani ki Vav in Patan, Gujarat, became a UNESCO World Heritage site. In her introduction, Lautman discusses why and where the stepwells were built. She reflects on the reasons they became derelict and  $\frac{Page}{9/11}$ 

considers how the appreciation of stepwells is changing with the work of organizations and individuals who aim to protect and restore them. The main part of the book is arranged in a broadly chronological order, with up to four pages devoted to each of c. 70 stepwells, every one unique in design and engineering. The name, location (including GPS coordinates) and approximate date of each well accompany colour photographs and a concise commentary by Lautman on the history and architecture of the well and her experience of visiting it. While many of the stepwells are rather decrepit, their magnificent engineering and great beauty never fail to impress.

The modern southwestern cities of Phoenix, Tucson, Las Vegas, Albuquerque, and El Paso occupy lands that once supported rich desert ecosystems. Typical development activities often resulted in scraping these desert lands of an ancient living landscape, to be replaced with one that is human-made and dependent on a large consumption of energy and natural resources. Design with the Desert: Conservation and Sustainable Development explores the natural and built environment of the American Southwest and introduces development tools for shaping the future of the region in a more sustainable way. Explore the Desert Landscape and Ecology This transdisciplinary collaboration draws on insights from leading authorities in their fields. spanning science, ecology, planning, landscape development, architecture, and urban design. Organized into five parts, the book begins by introducing the physical aspects of the desert realm: the land, geology, water, and climate. The second part deals with the "living" and ecological aspects, from plants and animals to ecosystems. The third part, on planning in the desert, covers the ecological and social issues surrounding water, natural resource planning,  $P_{age 10/11}$ 

and community development. Bring the Desert into the City The fourth part looks at how to bring nature into the built environment through the use of native plants, the creation of habitats for nature in urban settings, and the design of buildings, communities, and projects that create life. The final part of the book focuses on urban sustainability and how to design urban systems that provide a secure future for community development. Topics include water security. sustainable building practices, and bold architecture and community designs. Design Solutions That Work with the Local Environment This book will inspire discussion and contemplation for anyone interested in desert development, from developers and environmentalists to planners, community leaders, and those who live in desert regions. Throughout this volume, the contributors present solutions to help promote ecological balance between nature and the built environment in the American Southwest—and offer valuable insights for other ecologically fragile regions around the world.
