Offers readers studying the English language exercises to achieve a higher level of proficiency to become effective communicators.

Easy and enjoyable to teach, Touchstone is packed with new and exciting ideas, offering a fresh approach to the teaching and learning of English.

Each contributor responds to the other essayists, noting points of agreement as well as disagreement.

Since its first appearance, *Life in Classrooms* has established itself as a classic study of the educational process at its most fundamental level.

Touchstone Second edition is an innovative four-level American English course for adults and young adults, taking students from beginning (A1) to intermediate (B2) level. Touchstone uses a corpus-informed syllabus ensuring students are learning the language that people really use. Activities include a strong focus on inductive learning, personalized practice, and encouraging learner autonomy. Student's Book, Level 3B, includes Units 7-12 of Level 3 Student's Book and is at the low intermediate CEFR level (A2-B1).

New Close-up help learners get closer to the world through dynamic photography, video and real-world stories from National Geographic. Relevant, global topics, paired with a comprehensive four-skills syllabus, promote the key language and life skills teenagers need to succeed in international exams, in the classroom and in their future careers.

In this second edition of a Carus Monograph Classic, Steven G. Krantz, a leading worker in complex analysis and a winner of the Chauvenet Prize for outstanding mathematical exposition, develops material on classical non-Euclidean geometry. He shows how it can be developed in a natural way from the invariant geometry of the complex disk. He also introduces the Bergmann kernel and metric and provides profound applications, some of which have never appeared in print before. In general, the new edition represents a considerable polishing and re-thinking of the original successful volume. A minimum of geometric formalism is used to gain a maximum of geometric and analytic insight. The climax of the book is an introduction to several complex variables from the geometric viewpoint. Poincaré's theorem, that the ball and disc are biholomorphically inequivalent, is discussed and proved.
