and the most current coverage of techniques and trends in cardiopulmonary physical therapy. Edited by Donna Frownfelter and Elizabeth Dean, recognized leaders in cardiovascular and pulmonary rehabilitation, this resource is ideal for clinicals and for practice. Evidence-based practice is demonstrated with case studies, and the latest research supports PT decision-making. Real-life clinical cases show the application of concepts to evidence-based practice. Holistic approach supports treating the whole person rather than just the symptoms of a disease or disorder, covering medical, physiological, psychological, psychosocial, therapeutic, practical, and methodological aspects. Coverage includes both primary and secondary cardiovascular and pulmonary conditions. An integrated approach to oxygen transport demonstrates how the cardiovascular and pulmonary systems function together. Emphasis on the terminology and guidelines of APTA's Guide to Physical Therapist Practice keeps the book consistent with the standards for practice in physical therapy. Key terms and review questions in each chapter focus your learning on important concepts. The Evolve companion website includes additional resources such as a case study guide, Archie animations, color images, video clips, WebLinks, and references with links to MEDLINE abstracts. Full-color photos and illustrations enhance your understanding of the book's concepts. Two new Mobilization and Exercise chapters cover physiologic principles along with application to practice. Information on airway clearance techniques is revised and condensed into one comprehensive chapter. New reference style makes it easier to find resources by replacing the old author-date references with numbered superscripts linked to MEDLINE abstracts.

Quick and convenient, this resource provides a clinical overview of a wide variety of diseases and disorders that affect the cardiovascular system and lungs and the physical therapy management of patients with them. It integrates key concepts of pathophysiology, clinical manifestations, diagnostic tests and laboratory information and findings with clinically important medical and surgical interventions and pharmacologic therapies — then applies the material to physical therapy evaluation and treatment. This edition adds an introductory chapter on the oxygen transport pathway, the effects of dysfunction along the pathway, and the implications for physical therapy. physiology, the pathophysiology of commonly encountered cardiac and pulmonary disorders, diagnostic tests and procedures, therapeutic interventions, pharmacology, physical therapy evaluation and treatment, and clinical laboratory values and profiles. Uses a bulleted format to make finding information quick and easy. Lists the latest drugs used for the treatment of cardiopulmonary disorders. Includes information on laboratory medicine and pediatrics to help you apply cardiopulmonary principles to practice. Follows the oxygen transport pathway — the delivery, uptake and, extrication of oxygen as it actually functions in a clinical setting — providing a logical framework for understanding cardiopulmonary concepts. Explains the implications of defects in the pathway — essential considerations for clinical practice. Includes a comprehensive listing of common cardiopulmonary diseases, as well as a number of other diseases that are associated with cardiopulmonary dysfunction. Provides new and updated illustrations that depict common pathologies such as the pathophysiology of left ventricular diastolic and systolic dysfunction, volume versus pressure overload, and dilated versus hypertrophies versus restrictive cardiomyopathies. Includes descriptions of important interventions such as lung volume reduction surgery and lung transplantation. Adds a new section on simple anthropometric measurements for determining obesity, with information on this demographic trend and how it impacts assessment.

cardiopulmonary system in clinical care. As a part of Essentials in Physical Therapy led by Series Editor Dr. Marilyn Moffat, Cardiovascular/Pulmonary Essentials: Applying the Preferred Physical Therapist Practice Pattern(SM) is edited by Dr. Donna Frownfelter in a user-friendly format that not only brings together the conceptual frameworks of the Guide language, but also parallels the patterns of the Guide. In each case, where appropriate, a brief review of the pertinent anatomy, physiology, pathology, pharmacology, and imaging is provided. Each pattern then details two to three diversified case studies coinciding with the Guide format. The physical therapist examination, including history, systems review, and specific tests and measures for each case, as well as evaluation, diagnosis, prognosis, plan of care, and evidence-based interventions are also addressed. Sample Cases in Some of the Practice Patterns Include:

- Primary Prevention/Risk Reduction for Cardiovascular/Pulmonary Disorders: A junior high student status post hospitalization for pneumonia with personal and familial cardiovascular and pulmonary risk factors; A weekend warrior status post ACL repair with significant cardiovascular and pulmonary risk factors; A medically frail elderly female with CHF in failing health.
- Impaired Ventilation Respiration/Gas Exchange, and Aerobic Capacity / Endurance Associated with Airway Clearance Dysfunction: A child with CF exacerbation and failure to thrive; a forty year old patient with CF experiencing a pulmonary exacerbation; A patient with bronchitis and emphysema who has Organic Toxic Dust Syndrome.
- Impaired Ventilation and Respiratory/Gas Exchange Associated With Ventilatory Pump Dysfunction/Failure: A child with Duchenne Muscular Dystrophy who has acute shortness of breath with possible aspiration; A patient with Guillain Barre Syndrome, pneumonia and shortness of breath.
- Impaired

Circulation and Anthropometric Dimensions Associated With Lymphatic System Disorders: A female two years status post lumpectomy and lymph node dissection for breast cancer with secondary lymphedema of her right upper extremity; A male with lower extremity lymphedema following surgery for prostate cancer. At long last, Dr. Marilyn Moffat and Dr. Donna Frownfelter have created a book that will integrate the parameters of the Guide, as it relates to the cardiopulmonary system, into the practice arena, that not only covers the material but also allows for a problem-solving approach to learning for educators and students.

Cardiopulmonary Physical Therapy: Management and Case Studies, Second Edition is a unique and succinct textbook for the classroom that blends clinical notes on assessment and management together with case-based instructional approaches to cardiopulmonary care for acute and ambulatory care patients. This one-of-a-kind text describes current approaches that cover traditional physical therapist management strategies and includes evidence-based chapters on early mobilization and exercise training on a wide range of cardiopulmonary patient groups. The updated Second Edition presents twenty-four cases that were designed to complement each chapter topic and represent the most common pulmonary, cardiac, and neurological conditions that are typically managed in cardiopulmonary care.
