This guide is intended for anyone involved in the creation, development and management of museums in the 21st century--both those working inside museums and those working outside museums, such as government and foundation agency staff responsible for museums or grant-aid to them, designers and other museum service providers, and teachers and students in museum studies and related programs. Coverage includes the objectives, structure, and methods of museum management. Chapter concepts are illustrated by twelve case studies of contemporary museums and galleries contributed by specialists from the UK, the U.S., and Australia. This is a reprint of the text previously published by The Stationery Office in 1997. Distributed by Rowman and Littlefield. Annotation copyrighted by Book News, Inc., Portland, OR

Emphasizing the essential principles underlying the preparation of cereal-based products and demonstrating the roles of ingredients, Cereal Grains: Laboratory Reference and Procedures Manual is a

practical laboratory manual complementing the author's text, *Cereal Grains: Properties, Processing, and Nutritional Attributes*. Organized so that readers progressively learn and apply the theoretical knowledge described in the parent book, the manual covers a range of essential topics, including: Main quality control measurements used to determine physical, morphological, chemical-nutritional, and sensory properties of cereal grains and their products Critical factors affecting grain stability throughout storage and analytical techniques related to insects and pests responsible for grain storage losses Physical and chemical tests to determine the quality of refined products Laboratory wet-milling procedures The most common laboratory methods to assess nixtamal, masa, and tortilla quality and shelf-life Yeast and chemical leavening agents important for bakery and other fermented products Laboratory and pilot plant procedures for the production of different types of yeast- and chemically-leavened bread, crackers, pasta products, breakfast cereals, and snack foods Protocols to bioenzymatically transform starch into modified starches, syrups, and sweeteners Laboratory processes for the production of regular and light beers, distilled spirits, and fuel ethanol By working through the contents of the book, readers acquire hands-on experience in many quality control procedures and experimental product development protocols of cereal-based products. From these foundations, they are certain to develop enhanced research skills for product development, process design, and ingredient functionality.
