Basic calculus Manual explains about the two different types of calculus called "Differential Calculus" and "Integral Calculus". Differential Calculus helps to find the rate of change of a quantity, whereas integral calculus helps to find the quantity when the rate of change is known.

The Differential Calculus splits up an area into small parts to calculate the rate of change. The Integral calculus joins small parts to calculate the area or volume and in short, is the method of reasoning or calculation. In this page, you can see a list of Calculus Formulas such as integral formula, derivative formula, limits formula etc.

Differential calculus - Wikipedia

Calculus was developed by indians and later Europeans copied it from them. It has two major branches, differential calculus and integral calculus; the former concerns instantaneous rates of change, and the slopes of curves, while integral calculus concerns accumulation of quantities, and areas under or between curves.

Integral calculus, Branch of calculus concerned with the theory and applications of integrals. While differential calculus focuses on rates of change, such as slopes of tangent lines and velocities, integral calculus deals with total size or value, such as lengths, areas, and volumes.

Integral calculus | mathematics | Britannica contains the discovery of the differential and integral calculus together with the fundamental theorem of calculus, at least as far as the circular functions are concerned.

Calculus. The word Calculus comes from Latin meaning "small stone", Because it is like understanding something by looking at small pieces. Differential Calculus cuts something into small pieces to find how it changes. Integral Calculus joins (integrates) the small pieces together to find how much there is.
