In this book we display the fundamental structure underlying classical electro dynamics, i. e. , the phenomenological theory of electric and magnetic effects. The book can be used as a textbook for an advanced course in theoretical electrodynamics for physics and mathematics students and, perhaps, for

some highly motivated electrical engineering students. We expect from our readers that they know elementary electrodynamics in the conventional (1 + 3)-dimensional form including Maxwell's equations. More over, they should be familiar with linear algebra and elementary analysis, including vector analysis. Some knowledge of differential geometry would help. Our approach rests on the metric-free integral formulation of the conservation laws of electrodynamics in the tradition of F. Kottler (1922), E. Cartan (1923), and D. van Dantzig (1934), and we stress, in particular, the axiomatic point of view. In this manner we are led to an understanding of why the Maxwell equations have their specific form. We

“General Relativity Without Calculus” offers a compact but mathematically correct introduction to the general theory of relativity, assuming only a basic knowledge of high school mathematics and physics. Targeted at first year undergraduates (and advanced high school students) who wish to learn Einstein’s theory beyond popular science accounts, it covers the basics of special relativity, Minkowski space-time, non-Euclidean geometry, Newtonian gravity, the Schwarzschild solution, black holes and cosmology. The quick-paced style is balanced by over 75 exercises (including full solutions), allowing readers to

Oceanography and Marine Biology preserves the basic elements of the physical, chemical, and geological aspects of the marine sciences, and merges those fundamentals into a broader framework of marine biology and ecology. I have found that this approach works: my class of 350 students fills every semester it is offered, with students on waiting lists to get in. But existing textbooks on oceanography or marine biology address the companion field only cursorily: very few pages in oceanography texts are devoted to marine biology, and vice versa. This new book overcomes that imbalance, bringing these

disparate marine science text formats closer together, giving them more equal weight, and introducing more effectively the physical sciences by showing students with everyday examples how such concepts form the foundation upon which to build a better understanding of the marine environment in a changing world.

Sent home to Ireland on a secret mission for King Bridei of Fortriu, Faolan must first deliver the news of a brave warrior's death. Bridei's pagan kingdom, Faolan has become responsible for a child, a dog and Eile, a troubled, volatile young woman. For Eile, the journey to Fortriu is confronting. Accustomed to a life of deprivation and struggle, she finds herself facing an unfamiliar world, full of new lessons. For her, the hardest challenge of all will be learning to trust. At Bridei's court in White Hill, disturbing news from the neighbouring kingdom of Circinn prompts the king to call his chieftains to council. But after the disappearance of Bridei's closest adviser and the tragic death of a young maid, the threat posed by the encroaching influence of Christianity appears to be the least of the dangers at hand . . .

Includes a foreword by best-selling author Cody Lundin. The prepper's guide with a difference During the 1940's Britain suffered a national catastrophe that would become known as 'The Great Tribulation' by its survivors. The remnant of His Majesty's Government formed a department known as The Ministry of Survivors, the mandate of this office being to help, guide and inform the public through the anarchy around them. During the early years they produced and issued a handbook known as 'The Citizen Survivor's Guidebook'. However, as the situation became more desperate, the guidance within this book quickly became redundant. The Ministry deemed

that the only remaining course of action was to produce a second edition; informing people to evacuate the chaos of the towns and cities and flee to the countryside, focusing on wilderness survival and how to be self-sufficient on the move. This is a surviving copy of that handbook...
