This fascinating series looks at how the development of various ancient civilizations was largely affected by their physical geography. Presenting facts by asking questions encourages the reader to think about how and why events happened and encourage them to think about how geography affects their own way of life, and the reasons why geography might not be as influential today as it was in ancient times.

It was Herodotus who first called Egypt "the gift of the river." Now renowned Egyptologist Toby Wilkinson takes us along the Nile to reveal how it continues to hold the key to understanding the earliest of the great ancient civilizations as well as the volatile and rapidly modernizing country that is Egypt today. Wilkinson's narrative takes us from the river's mystical sources (the Blue Nile which rises in Ethiopia, and the White Nile coursing from majestic Lake Victoria); to

Thebes, with its Valley of the Kings, Valley of the Queens, and Luxor Temple; the fertile Delta; Giza, home of the Great Pyramid, the sole surviving Wonder of the Ancient World; and finally, to the pulsating capital city of Cairo, where the Arab Spring erupted on the bridges over the Nile. Along the way, he introduces us to mysterious and fabled characters--the gods and pharaohs, emperors and empresses, who joined their fate to the Nile and gained immortality; the adventurers, archaeologists, and historians who have all fallen under its spell. With matchless erudition and storytelling skill, through both panoramas and close-ups, Wilkinson brings millennia of history into view.--From publisher description.

started to excavate its course in the Egyptian plateaus in late Miocene time in response to the lowering sea level of the desiccating Mediterranean. It formed a canyon longer, deeper, and just as awe inspiring as the Grand Canyon, Arizona. The canyon was transgressed by the advancing Mediterranean as it started filling during the early Pliocene, and since then by a number of rivers which ebbed and flowed as they succeeded one another. The modern Nile is a recent and humble successor to mighty rivers which once occupied the Nile Valley.

Egypt's relationship with the Nile River forever changed. Flooding villages of historical northern Nubia and filling the irrigation canals that flowed from the river, the perennial Nile not only reshaped agriculture and the environment, but also Egypt's colonial economy and forms of subjectivity. Jennifer L. Derr follows the engineers, capitalists, political authorities, and laborers who built a new Nile River through the nineteenth and early twentieth centuries. The river helped to shape the future of technocratic knowledge, and the bodies of those who inhabited rural communities were transformed through the environmental intimacies of their daily lives. At the root of this investigation lies the notion that the Nile is not a singular entity, but a realm of practice and a set of temporally, spatially, and materially specific relations that structured experiences of colonial economy. From the microscopic to the regional, the local to the imperial, *The Lived Nile* recounts the history and centrality of the environment to questions of politics, knowledge, and the lived experience of the human body itself.

From Herodotus's day to the present political upheavals, the steady flow of the Nile has been Egypt's heartbeat. It has shaped its geography, controlled its economy and moulded its civilisation. The same stretch of water which conveyed Pharaonic battleships, Ptolemaic

grain ships, Roman troop-carriers and Victorian steamers today carries modern-day tourists past bankside settlements in which rural life - fishing, farming, flooding - continues much as it has for millennia. At this most critical juncture in the country's history, foremost Egyptologist Toby Wilkinson takes us on a journey up the Nile, north from Lake Victoria, from Cataract to Cataract, past the Aswan Dam, to the delta. The country is a palimpsest, every age has left its trace: as we pass the Nilometer on the island of Elephantine which since the days of the Pharaohs has measured the height of Nile floodwaters to predict the following season's agricultural yield and set the parameters for the entire Egyptian economy, the wonders of Giza which bear the scars of assault by nineteenth-century archaeologists and the modern-day unbridled urban expansion of Cairo - and in Egypt's earliest art (prehistoric images of fish-traps carved into cliffs) and the Arab Spring (fought on the bridges of Cairo) - the Nile is our guide to understanding the past and present of this unique, chaotic, vital, conservative yet rapidly changing land.

volume, one of the world's most renowned Egyptologists tells the epic story of this great civilization, from its birth as the first nation-state to its absorption into the Roman Empire. Drawing upon forty years of archaeological research, award-winning scholar Toby Wilkinson takes us inside a tribal society with a pre-monetary economy and decadent, divine kings who ruled with all-too-recognizable human emotions. Here are the legendary leaders: Akhenaten, the "heretic king," who with his wife Nefertiti brought about a revolution with a bold new religion; Tutankhamun, whose dazzling tomb would remain hidden for three millennia; and eleven pharaohs called Ramesses, the last of whom presided over the militarism, lawlessness, and corruption that caused a political and societal decline. Filled with new information and unique interpretations, *The Rise and Fall of Ancient Egypt* is a riveting and revelatory work of wild drama, bold spectacle, unforgettable characters, and sweeping history. "With a literary flair and a sense for a story well told, Mr. Wilkinson offers a highly readable, factually up-to-date account."—*The Wall Street Journal*
"[Wilkinson] writes with considerable verve. . . . [He] is nimble at conveying the sumptuous pageantry and cultural sophistication of pharaonic Egypt."—*The New York Times*

The waters of the Nile are fundamental to life in Egypt. In this compelling ethnography, Jessica Barnes explores the everyday politics of water: a politics anchored in the mundane yet vital acts of blocking, releasing, channeling, and diverting water. She examines the quotidian practices of farmers, government engineers, and international donors as they interact with the waters of the Nile flowing into and through Egypt. Situating these local practices in relation to broader processes that affect Nile waters, Barnes moves back and forth from farmer to government ministry, from irrigation

canal to international water conference. By showing how the waters of the Nile are constantly made and remade as a resource by people in and outside Egypt, she demonstrates the range of political dynamics, social relations, and technological interventions that must be incorporated into understandings of water and its management.
