With increasing emphasis being placed on screening and early prevention in cancer, this textbook examines the various methods and interventions used in screening in lung cancer, and presents a detailed review of the approaches to prevention and treatment of early disease. It will be of particular interest to lung cancer and respiratory medicine specialists.

Global experts, in conjunction with the International Association for the Study of Lung Cancer, bring you up to date with today's best approaches to lung cancer diagnosis, treatment, and follow-up. IASLC Thoracic Oncology, 2nd Edition, keeps you abreast of the entire scope of this fast-changing field, from epidemiology to diagnosis to treatment to advocacy. Written in a straightforward, practical style for the busy clinician, this comprehensive, multidisciplinary title is a must-have for anyone involved in the care of patients with lung cancer and other thoracic malignancies. Offers practical, relevant coverage of basic science, epidemiology, pulmonology, medical and radiation oncology, surgery, pathology, palliative care, nursing, and advocacy. Provides authoritative guidance from the IASLC – the only global organization dedicated to the study of lung cancer. Includes new content on molecular testing, immunotherapy, early detection, staging and the IASLC staging system, surgical resection for stage I and stage II lung cancer, and stem cells in lung cancer. Features a new full-color design throughout, as well as updated diagnostic algorithms.

The main objective of this book is to present the recent applications of photodynamic therapy (PDT) in treating cancer and other diseases. The limitations associated with current PDT agents, and the synthetic designs that have been used in various laboratories are also discussed. The utility of certain tumor-avid agent for cancer imaging (fluorescence, PET, MRI) is also summarized. The book also

includes the use of delivery vehicles, including nanoparticles in improving the tumor-specificity of the desired agents. The book is basically focused on the translational approach of drug development. By providing certain specific examples, a clear concept of moving a 'product' from the bench to bed-side is also discussed. To have a clear concept of drug development the book is divided in three parts — Medicinal Chemistry, Mechanistic and Clinical studies. Each part includes the contributions from the leading scientists with extensive experience in the respective field. The handbook is assembled by renowned scientists Dr Dougherty, known as the father of PDT, Dr Kessel, well known for his contributions on mechanism of PDT and Dr Pandey for his inventions in developing improved agents for PDT and cancer-imaging.

In this fourth edition of the popular Flexible Bronchoscopy, which has been revised and updated throughout, the world's leading specialists discuss the technical and procedural aspects of performing diagnostic and therapeutic bronchoscopy. Four new chapters have been added, taking into account new developments in EBUS and electromagnetic navigation.

Combining a professional development course on diagnostic endoscopy from SPIE (the international society advancing light-based research) and the authors' graduate course on biomedical optics, this work is written for researchers in medical optics and biomedical engineering as well as graduate medical optics students. It uses extensive examples/case studies to familiarize readers with the basics of endoscopic optics, the pros and cons of white light endoscopy and fluorescence endoscopy for diagnostic applications, and various microscopic endoscopy imaging modalities. It covers basic optics, details of design and biomedical uses, as well as microscopic endoscopy, and endoscopic spectroscopy.

Pathological examination forms a key element in the final diagnosis of a variety of malignant and non-malignant respiratory disorders, and directs treatment. Research has contributed to important advances in the pathological diagnosis of these respiratory disorders. This book is a complete overview of diagnostic procedures and pathological examination data, which helps support the clinician in the decision-making process. This Monograph covers the pathology of neoplastic diseases, infections, obstructive and interstitial lung diseases, and pulmonary manifestations of systemic diseases, with al.

The best and most concise single source for state-of-the-art diagnosis and treatment of lung cancer — newly revised, updated, and expanded. Lung cancer has long been the number-one cause of death from cancer every year and the third most frequently diagnosed after breast and prostate cancers. In 2010, about 15% of all cancer diagnoses and 30% of all cancer deaths were due to lung cancer. Needless to say, there is a great need for more rapid advancements in diagnosis and treatment of this devastating disease. Here is the comprehensively revised, updated, and expanded edition of the well-established, evidence-based reference book that deals with the most recent advances in lung cancer prevention, screening, diagnosis, research, and treatment for the clinician. Edited and authored by leading authorities in the field, this Fourth Edition of the highly regarded Lung Cancer is better than ever — featuring nine new chapters along with seven re-formatted ones that are nearly brand new in content and approach. It covers Smoking Prevention and Cessation; Molecular Profiling; Somatic Genome Alterations in Human Lung Cancers; Management of Multi-Focal Bronchioloalveolar Carcinoma (BAC); Primary Tracheal Tumors; Predictive Tumor Biomarkers for EGFR Inhibitors; Non-Small Cell and Small-Cell Lung Carcinoma; and more. This Fourth Edition of Lung Cancer: Provides the very latest research in the identification of biomarkers to predict a high risk for developing lung cancer — vital for implementing screening, diagnosis, and prevention strategies. Presents the newest lung cancer staging system, as well as updated and cutting-edge surgical and radiation therapy techniques that make local tumor control more effective and less invasive while sparing normal tissues. Discusses combined modality therapy and new chemotherapeutic agents which are yielding higher response rates and improved survival when used in the adjuvant setting or concurrent with highly sophisticated radiation or proton treatment. Offers novel and emergent approaches to preventative, diagnostic, and therapeutic modalities with an emphasis on the best evidence available from the latest studies and clinical trials. With almost half of the revised and updated content being brand new, Lung Cancer, Fourth Edition, is an important and vital resource for all medical professionals and students involved in the care and treatment of those struck with this catastrophic illness.

Ideal for fellows and practicing pulmonologists who need an authoritative, comprehensive reference on all aspects of pulmonary medicine, Murray and Nadel's Textbook of Respiratory Medicine offers the most definitive content on basic science, diagnosis, evaluation and treatment of the full spectrum of respiratory diseases. Full-color design enhances teaching points and highlights challenging concepts. Understand clinical applications and the scientific principles of respiratory medicine. Detailed explanations of each disease entity allow you to work through differential diagnoses. Key Points and Key Reading sections highlight the most useful references and resources for each chapter. An expanded sleep section now covers four chapters and includes control of breathing, consequences of sleep disruption, as well as obstructive and central apnea. New chapters in the Critical Care section cover Noninvasive Ventilation (NIV) and Extracorporeal Support of Gas Exchange (ECMO). New chapters focusing on diagnostic techniques now include Invasive Diagnostic Imaging and Image-Guided Interventions and Positron Emission Tomography, and a new chapter on Therapeutic Bronchoscopy highlights the interventional role of pulmonologists.

Thoroughly revised and updated, this Fourth Edition is the most comprehensive, current reference on lung cancer, with contributions from the world's foremost surgeons, radiation oncologists, medical oncologists, pulmonologists, and basic scientists. Coverage includes complete information on combined modality treatments for small cell and non-small cell lung cancer and on complications of treatment and management of metastases. Emphasis is also given to early detection, screening, prevention, and new imaging techniques. This edition has expanded thoracic oncology chapters including thymus, mesothelioma, and mediastinal tumors, more detailed discussion of targeted agents, and state-of-the-art information on newer techniques in radiotherapy. Other highlights include more international contributors and greater discussion of changes in lung cancer management in each region of the world. A new editor, Giorgio Scagliotti, MD from the University of Turin, has coordinated the accounts of European activities. A companion website includes the full text online and an image bank.
