But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history,

historical predecessors. In this pioneering work, he proposes a new model of the human psyche that takes account of his findings. Grof includes in his model the recollective level, or the reliving of emotionally relevant memories, a level at which the Freudian framework can be useful. Beyond that is perinatal level in which the human unconscious may be activated to a reliving of biological birth and confrontation with death. How birth experience influences an individual's later development is a central focus of the book. The most serious challenge to contemporary psycho-analytic theory comes from a delineation of the transpersonal level, or the expansion of consciousness beyond the boundaries of time and space. Grof makes a bold argument that understanding of the perinatal and transpersonal levels changes much of how we view both mental illness and mental health. His reinterpretation of some
