Comparative politics is a field in political science characterized either by the use of the comparative method or other empirical methods to explore politics within (as opposed to between) countries.

Substantively, this can include questions relating to political institutions, political behavior, conflict, and the causes and consequences of economic development.

strengths and limitations, and an account of their relationship to the evolution of the discipline of political science. Illustrated throughout with boxed examples of real political research, the book ranges widely from substantial coverage of statistical methods to the use of archives, interviews, discourse analysis and the internet. Two concluding chapters cover ethical issues and the relationship between theories and methods with a special emphasis on combining traditions and approaches.

Written with the novice educational researcher in mind, *Research Methods in Education* is designed to help students produce good quality, valid and valuable research. The text is written in an engaging style and adopts a mixed-methods approach; guidance on analytical procedures that require more advanced tools such as SPSS and Minitab are also provided. The book is packed with exercises, examples and comparative international material from other educational contexts, all of which help to introduce this complex subject in an easy to use format for people that are new to research and are not confident with numerical information. Peter Newby's student-friendly text allows the researcher to confidently address the practical aspects of deciding on a research project, designing a questionnaire or presenting conclusions in the most convincing way. "Of the many research books available this one stands out as it is clear, logically structured, explains sophisticated concepts in an accessible manner without oversimplifying them and has a format which students (at undergraduate and postgraduate) like. In addition the powerpoint slides that accompany the

book provide an excellent basis for lectures and can be edited / adopted to personalise them. I anticipate using this book for quite some time on several courses." Dr Pete Allison, Coordinator of Masters Research courses at The Moray House School of Education, The University of Edinburgh

In the last ten years there has been significant expansion of postgraduate education in the social sciences. A proliferation of new taught MA courses and substantial growth in the number of new research students have led to a renewed interest in the research process and the teaching of research methods. A number of existing methodology texts present a sanitized and idealized image of research which is both misleading and remains silent on many of the crucial issues facing postgraduates - issues to do with the research process rather than the development of competence in specific techniques. This edited volume seeks to remedy some of these deficiencies and to contribute to the emerging literature on the analysis of postgraduate education and training in the social sciences. It aims to do this by breaking new ground in the field of Politics and International Studies (PALS). It is the first book oriented specifically to postgraduates in the discipline focusing on themes, issues and methods in research training. The selection of new issues (progress through the years, teaching assistants, publications, jobs) plus a focus on approaches which conventionally receive little attention (metatheory, comparative analysis, archives, information technology) increases further the distinctiveness and appeal of the book, making it an invaluable source and guide book for

post graduate students.

The third edition of *Research Methods for Political Science* retains its effective approach to helping students learn what to research, why to research and how to research. The text integrates both quantitative and qualitative approaches to research in one volume and covers such important topics as research design, specifying research problems, designing questionnaires and writing questions, designing and carrying out qualitative research and analyzing both quantitative and qualitative research data. Heavily illustrated, classroom tested, exceptionally readable and engaging, the text presents statistical methods in a conversational tone to help students surmount "math phobia." Updates to this new edition include: Research topics chapters have been upgraded and expanded. Two mixed methods design chapters have been added. A new chapter on hermeneutic analysis designs and research with large data sets. The chapter on multivariate statistics has been expanded, with an expanded discussion on logistic regression. Tools on how to prepare and present research findings are now featured in the appendix, allowing instructors more flexibility when teaching their courses. *Research Methods for Political Science* will give students the confidence and knowledge they need to understand the methods and basic skills for data collection, presentation and analysis.

research if you get placed on a government watchlist? And what if you find yourself feeling like you just aren't cut out for fieldwork? *Stories from the Field* is a relatable, thoughtful, and unorthodox guide to field research in political science. It features personal stories from working political scientists: some funny, some dramatic, all fascinating and informative. Political scientists from a diverse range of biographical and academic backgrounds describe research in North and South America, Africa, Asia, Europe, and the Middle East, ranging from archival work to interviews with combatants. In sharing their stories, the book's forty-four contributors provide accessible illustrations of key concepts, including specific research methods like conducting surveys and interviews, practical questions of health and safety, and general principles such as the importance of flexibility, creativity, and interpersonal connections. The contributors reflect not only on their own experiences but also on larger questions about research ethics, responsibility, and the effects of their personal and professional identities on their fieldwork. *Stories from the Field* is an essential resource for graduate and advanced undergraduate students learning about field research methods, as well as established scholars contemplating new journeys into the field.

The significantly updated third edition of this short, practical book prepares students to write a questionnaire, generate a sample, conduct their own survey research, analyse data, and write up the results, while learning to read and interpret excerpts from published research. It combines statistics and
