Stability Theory of Differential Equations. Suitable for advanced undergraduates and graduate students, this was the first English-language text to offer detailed coverage of boundedness, stability, and asymptotic behavior of linear and nonlinear differential equations.

Stability Theory of Differential Equations

In terms of the solution of a differential equation, a function $f(x)$ is said to be stable if any other solution of the equation that starts out sufficiently close to it when $x = 0$ remains close to it for succeeding values of x .

STABILITY THEORY FOR ORDINARY DIFFERENTIAL EQUATIONS 61 Part (b). Here we assume $a = \infty$, and because $\int (W(x(t))) dt < \infty$, the boundedness of the derivative of $W(x(t))$ almost everywhere from above (or from below) implies $W(x(t)) \rightarrow 0$ as $t \rightarrow \infty$. Since W is continuous, $W(p) = 0$, and this completes the proof of (b).

We could try to work out the stability of the other point by hand, but it'lls messy. In this case, it'lls far better to use Maple. The steps in the analysis are much the same, although it takes a few tricks to get to the bottom of this exercise. We start by denning the differential equations: $\dot{a} := (a,b) \rightarrow -a^2 + \alpha a^2 b$; $\dot{a} := (a,b) \rightarrow a^2 + \alpha ab$

Stability Theory of Differential Equations by Richard ...

In mathematics, a stiff equation is a differential equation for which certain numerical methods for solving the equation are numerically unstable, unless the step size is taken to be extremely small.It has proven difficult to formulate a precise definition of stiffness, but the main idea is that the equation includes some terms that can lead to rapid variation in the solution.

Fundamental Theory 1.1 ODEs and Dynamical Systems Ordinary Differential Equations An ordinary differential equation (or ODE) is an equation involving derivatives of an unknown quantity with respect to a single variable. More precisely, suppose $j; n \geq 2$, E is a Euclidean space, and $F \subset \text{dom } F \subset \mathbb{R}^n \subset \mathbb{C}^n$ copies $\boldsymbol{\phi} \in \boldsymbol{f} \in \boldsymbol{R}^j$; (1.1)
